## Purpose of This Brief

This brief is intended to open a scoping conversation with Swiss fintech / financial-markets counsel. It summarizes the proposed NESU structure and the regulatory questions that should be resolved before further design, fundraising, or technical implementation. It is not itself a legal opinion.

## What Is Being Proposed

NESU (Nur Energy Settlement Unit) is a proposed permissioned, gold- and commodity-backed digital settlement instrument intended exclusively for sovereign governments, central banks, state energy companies, and approved institutional counterparties, initially for cross-border energy and strategic-resource trade between Algeria and Europe. The concept is not intended for retail issuance, public trading, or a secondary market.

## Proposed Swiss Role

A possible Swiss entity could serve as operator, technical steward, and/or neutral governance host for the settlement ledger. The entity form, canton, and regulatory structure remain open questions for qualified Swiss counsel.

## Questions for Swiss Counsel

Digital-UNI seeks an initial FINMA classification view; analysis of whether the DLT Act trading-facility regime applies to a non-tradable settlement rail; identification of the appropriate licensing or oversight pathway, including possible FinMIA implications; recommended sequencing for entity formation and regulatory engagement; and coordination considerations involving Algerian law and EU MiCA.

## Scope of Work Requested

Requested work includes a non-binding initial classification view, a proposal and fee estimate for a formal legal opinion, recommendations on entity form and canton where appropriate, and information about relevant experience with sovereign-linked, wholesale, non-tradable settlement structures.

## Supporting Materials

Available supporting materials include the full NESU conceptual proposal, the Algeria-Europe Energy Settlement Corridor companion document, and a global multi-corridor overview including environmental-accountability concepts.

## Disclaimer

This is a conceptual and organizational document prepared to initiate a legal-services engagement. It is not legal, financial, or investment advice. The proposed structure does not currently exist and has not been reviewed or authorized by FINMA, the Bank of Algeria, any EU institution, or any other regulator. Regulatory descriptions should be independently verified by qualified counsel.
